

Introduction to General Relativity

D. Puetzfeld - ITA - Fall 2007

Depending on interest we are planning to have a set of introductory lectures on Einstein's theory of Gravitation, i.e., General Relativity during this fall semester.

The lectures will be supplementary to other courses at the ITA, in particular this fall's course on cosmology, and take place on a completely voluntary basis (i.e., no official credits can be claimed for this course).

The lectures will only take place if a sufficient number of people signs up for them. Potential participants should send an email with their name and the days + hours (during a

semester's week) at which they cannot attend the lecture to:

dirk.puetzfeld@astro.uio.no

We will try to schedule the lectures accordingly. Further inquiries and requests should also be directed to the email address mentioned above.

The announcements of the single lectures and further information will be made available on:
